A herbicide for the selective management of undesirable vegetation in and around aquatic sites and terrestrial non-crop areas, industrial sites and rights-of-ways. The herbicide may be used on listed sites that are cut for hay or grazed.

**ACTIVE INGREDIENT:**
Ammonium salt of imazamox* 12.1%

**OTHER INGREDIENTS:** 87.9%

**TOTAL:** 100.0%

*Equivalent to 11.4% imazamox acid

Contains 1 pound of imazamox acid equivalent per gallon.

**PRODUCT INFORMATION**
Alligare IMOX Herbicide is a water miscible concentrate designed to mix with water to form a solution. It may be diluted with water or applied directly to aquatic sites for selective vegetation management of susceptible aquatic vegetation or diluted and applied as a broadcast or spot spray to control target floating and emergent terrestrial and riparian vegetation.

Aquatic sites include: arroyos, bayous, canals and irrigation canals, creeks, ditches, estuarine sites, marine sites, lakes, marshes, ponds, rivers, slow-moving or quiescent bodies of water, streams, swamps and wetlands. The sites listed above may be treated with Alligare IMOX Herbicide during drought conditions.

**USER SAFETY RECOMMENDATIONS**

**ENDANGERED PLANT SPECIES**
To prevent potential negative impacts to endangered plant species, DO NOT apply Alligare IMOX Herbicide in a way that adversely affects federally listed endangered and threatened species.

**PHYSICAL OR CHEMICAL HAZARDS**
Harmful if absorbed through skin or inhaled. Causes moderate eye irritation.

**PRECAUTIONARY STATEMENTS**

**RESISTANCE MANAGEMENT RECOMMENDATIONS**
For resistance management, Alligare IMOX Herbicide is a Group 2 herbicide. Any weed population may contain or develop plants naturally resistant to Alligare IMOX Herbicide and other Group 2 herbicides. Weed species with acquired resistance to Group 2 herbicides may eventually dominate the weed population if Group 2 herbicides are used repeatedly in the same field or in successive years as the primary method of control for target species. This may result in partial or total loss of control of those species by Alligare IMOX Herbicide or other Group 2 herbicides.

Suspected herbicide-resistant weeds may be identified by these indicators:

- Failure to control a weed species normally controlled by the herbicide at the dose applied, especially if control is achieved on adjacent weeds;
- A spreading patch of non-controlled plants of a particular weed species;
- Surviving plants mixed with controlled individuals of the same species.

To delay herbicide resistance:

- Avoid the consecutive use of Alligare IMOX Herbicide or other target site of action Group 2 herbicides that might have a similar target site of action, on the same weed species.
- Use tank mixtures or premixes with herbicides from different target site of action Groups as long as the involved products are all registered for the same use, have different sites of action and are both effective at the tank mix or prepack rate on the weed(s) of concern.
- Base herbicide use on a comprehensive Integrated Pest Management (IPM) program.
- Scout fields prior to application to identify the weed species present and their growth state to determine if the intended application will be effective.
- Scout fields after application to verify that the treatment was effective.

**FIRST AID**

**HOT LINE NUMBER**
Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact 1-800-424-9300 for emergency medical treatment information.

**ENVIRONMENTAL HAZARDS**
This pesticide may be hazardous to plants outside the treated area. Do not apply to water except as specified in this label. Do not contaminate water when disposing of equipment washwater and rinseate.

**PHYSICAL OR CHEMICAL HAZARDS**
Do not mix or allow coming in contact with oxidizing agents. Hazardous Chemical Reaction may occur.
**ADJUVANTS**

For applications of Alligare IMOX Herbicide to emergent, floating or shoreline species, use of a spray adjuvant is required. The spray adjuvant used must be appropriate for aquatic sites. Nonionic Surfactants: Use a nonionic surfactant at 0.25% volume/volume (v/v) or higher (see manufacturer’s label) of the spray solution. The surfactant concentration (0.25% v/v is equivalent to 1 quart in 100 gallons). For best results, select a nonionic surfactant with an HLB (hydrophilic to lipophilic balance) ratio between 12 and 17 with at least 70% surfactant in the formulated product (alcohols, fatty acids, oils, ethylene glycol or diethylene glycol should not be considered as surfactants to meet the above requirements). Methylated Seed Oils or Vegetable Oil Concentrates: Methylated seed oil (MSO) or vegetable oil concentrate (VOC) may be used in replacement of a surfactant at 1 to 2 parts per acre. When using spray volumes greater than 30 gallons per acre, mix methylated seed oil or vegetable oil concentrates at 1% v/v of the total spray volume. This data indicates MSO aids in the deposition and imazamox uptake by plants under stress. Silicone-Based Surfactants: Silicone-based surfactants allow greater spreading of the spray droplet on the leaf surface, as compared to conventional nonionic surfactants. However, some silicone-based surfactants may dry too quickly and limit herbicide uptake or cause a target floating plant to sink quickly. Refer to the surfactant manufacturer’s label for specific rates. Invert Emulsions: Alligare IMOX Herbicide may be applied as an invert emulsion spray. Prior to preparing an invert emulsion (water – oil) spray, conduct a jar test to check spray mixture compatibility. Invert emulsion sprays are designed to minimize spray drift and spray runoff, resulting in more herbicide on the target foliage. Use a single tank (batch mixing) or injected (in-line mixing) to prepare the invert emulsion spray. Refer to the emulsifier manufacturer’s label for specific rates and proper mixing directions for aquatic sites. Other: An antifoaming agent, spray pattern indicator, sinking or drift control agent may be applied at the product labeled rate if necessary or desired. Tank Mixing: It is the pesticide user’s responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture. **SPRAY DRIFT MANAGEMENT (Mandatory)**

**Aerial Applications**

- Do not release spray at a height greater than 10 ft above the vegetative canopy, unless a greater application height is necessary for pilot safety.
- For all applications, applicators are required to use a Coarse or coarser droplet size (ASABE S572.1).
- The boom length must not exceed 65% of the wingspan for airplanes or 75% of the rotor blade diameter for helicopters.
- Applicators must use ½ swath displacement upwind at the downwind edge of the application site.
- Nozzles must be oriented so the spray is directed toward the back of the aircraft.
- Do not apply when wind speeds exceed 10 miles per hour at the application site.
- Do not apply during temperature inversions.

**Ground Applications**

- Apply with the nozzle height recommended by the manufacturer, but no more than 3 feet above existing terrestrial or aquatic vegetation.
- For all applications, applicators are required to use a Coarse or coarser droplet size (ASABE S572.1).
- Do not apply when wind speeds exceed 10 miles per hour at the application site.
- Do not apply during temperature inversions.

**SPRAY DRIFT ADVISORIES**

- The applicator is responsible for avoiding off-site spray drift. Be aware of nearby non-target sites and environmental conditions.
- Importance of droplet size: An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.
  - Controlling Droplet Size - Ground Boom
  - Volume - Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher flow rate.
  - Pressure - Use the lowest spray pressure recommended for the nozzle to produce the target spray volume and droplet size.
  - Spray Nozzle - Use a spray nozzle that is designed for the intended application. Consider using nozzles designed to reduce drift.
  - Controlling Droplet Size - Airplane
    - Adjust Nozzles - Follow nozzle manufacturers recommendations for setting up nozzles. Generally, to reduce fine droplets, nozzles should be oriented parallel with the airflow in flight.
  - BOOM HEIGHT - Ground Boom
  - Use the lowest boom height that is compatible with the spray nozzles that will provide uniform coverage. For ground equipment, the boom should remain level with the application site and have minimal bounce.
  - RELEASE HEIGHT - Aircraft
  - Higher release heights increase the potential for spray drift. When applying aerially, do not release spray at a height greater than 10 ft above the canopy, unless a greater release height is necessary for pilot safety.
  - SHIELDED SPRAYERS
  - Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.
- TEMPERATURE AND HUMIDITY
  - When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.
- TEMPERATURE INVERSIONS
  - Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions.
- WIND
  - Drift potential generally increases with wind speed. AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS.

Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

**TERRESTRIAL USE DIRECTIONS**

Apply Alligare IMOX Herbicide with ground and aerial equipment including both fixed-wing aircraft and helicopter in sufficient water to obtain uniform distribution of spray to targeted foliage. Use foliar broadcast spray, foliar spot spray, injection (hack and squirt), frill and girdle, cut stump, or basal methods of applications. **Broadcast Spray Application**

DO NOT apply more than 1 gallon of Alligare IMOX Herbicide per acre per year.

**Foliar Spot Application**

Apply as a solution containing up to 5% v/v Alligare IMOX Herbicide spray. **Injection (Hack and Squirt), Frill and Girdle, and Cut Stump Application**

Treatments may be made using up to 100% v/v Alligare IMOX Herbicide solution. **Basal Application**

Treatments can be made using up to 25% v/v Alligare IMOX Herbicide spray. Basal applications require the use of a good emulsion system to maintain Alligare IMOX Herbicide in a stable emulsion with a penetrating agent.

**TERRESTRIAL RESTRICTIONS**

DO NOT apply more than 1 pound of imazamox acid equivalent (1 gallon) per acre per year.

DO NOT exceed 2 applications of Alligare IMOX Herbicide per year.

Minimum Retreatment Interval: 14 days

**Vegetation Controlled**

Alligare IMOX Herbicide may be used for the control of the following plant species. Alligare IMOX Herbicide may be effective for the control or suppression of additional plant species not listed below. The use of Alligare IMOX Herbicide for the control or suppression of undesirable plants not listed below may be done at the discretion of the user.

To the extent consistent with applicable law, the user assumes responsibility for any lack of control or suppression associated with application to weeds not listed on this label.

**Foliar Application - Species Controlled**

</table>
Apply Alligare IMOX Herbicide at 64 - 128 fluid ounces per acre or 0.5 - 2.0% v/v spray as a foliar application for control of Chinese tallowtree in and around tolerant tree species. Control Chinese tallowtree with foliar applications using aerial, handgun, or backpack application methods. Use an application method and spray volume that provides adequate coverage of targeted Chinese tallowtree plants. Add methylated seed oil at 1 quart per acre for broadcast applications, or at 1% v/v for spot backpack and handgun applications. Tolerant hardwood species may exhibit varying degrees of leaf discoloration and temporary injury.

Areas that may be Grazed or Cut for Hay
Alligare IMOX Herbicide applied to listed aquatic and terrestrial non-crop sites may be grazed or cut for hay at a maximum use rate of 1 gallon per acre of Alligare IMOX Herbicide or 5% v/v spray for spot treatments. There are no grazing or haying restrictions.

**AQUATIC USE DIRECTIONS**
Apply Alligare IMOX Herbicide beneath the water surface or broadcast directly to the water surface for the control of target submerged aquatic plant species and for some emergent and floating species, or as a foliar broadcast application for emergent and floating species.

Apply Alligare IMOX Herbicide with ground and aerial equipment including both fixed-wing aircraft and helicopter in sufficient water to obtain uniform distribution of spray to water surface and targeted foliar applications.

Water Application to Submerged, Emergent and Floating Vegetation
Inject below the water surface or broadcast apply to the water surface with Alligare IMOX Herbicide to control submerged aquatic plant species and some emergent and floating species. Apply Alligare IMOX Herbicide as an undiluted product or diluted with water prior to application. When surface-matted conditions exist, inject Alligare IMOX Herbicide beneath the water surface to improve product distribution and efficacy.

Apply Alligare IMOX Herbicide to water to achieve a final concentration of the active ingredient of no more than 500 ppb. To maintain the desired vegetation response, multiple applications of Alligare IMOX Herbicide may be made during the annual growth cycle.

* Alligare IMOX Herbicide contains 1.0 lb of imazamox acid equivalent per gallon. 1 gallon = 128 fl. oz.

**Foliar Application to Listed Emergent and/or Floating Vegetation**
Broadcast apply or spot treat the water surface with Alligare IMOX Herbicide to control emergent and floating species. For broadcast applications, use a minimum of 10 gallons of water per surface acre in properly calibrated equipment for uniform coverage. Use higher spray volumes to ensure uniform spray coverage, when treating areas with large and/or dense vegetation. To minimize the drift potential, users should use an appropriate spray pressure depending upon spray equipment, conditions and application objectives. (See Spray Drift Ground Boom Application Requirements section.) As a spot treatment, use from 0.25 - 5% v/v Alligare IMOX Herbicide spray.

To enhance foliar applications on emergent and floating weeds, always use an adjuvant. If spray is washed off by wave action, control will be reduced.

In aquatic sites, application techniques described in the Terrestrial Use Directions section may be used to treat target emergent vegetation.

**Aerial Application**
Both fixed-wing aircraft and helicopter may be used to apply Alligare IMOX Herbicide by air. For direct applications to the water, there is no minimum spray volume. For broadcast applications targeting emergent and/or floating vegetation, use a minimum of 5 gallons of water per surface acre in properly calibrated equipment for uniform coverage. For aerial applications, best results are obtained by using a minimum of 20 gallons per acre. (See Spray Drift Aerial Application Requirements section.)

**Drawdown Application**
Alligare IMOX Herbicide may be used for preemergence and/or postemergence control/suppression of aquatic vegetation in drawdown situations. As a broadcast spray, apply Alligare IMOX Herbicide at rates up to 1 gallon per acre or as a spot treatment with up to 5% v/v Alligare IMOX Herbicide spray. After water has receded and exposed soil is moist to dry, make application. After foliar postemergence applications, delay at least two weeks before reintroducing water.

**AQUATIC RESTRICTIONS**

**DO NOT exceed maximum use rate per application:**

**Water treatment** - 500 parts per billion (ppb) (173 fluid ounces of Alligare IMOX Herbicide (1.35 pounds of imazamox acid equivalent) per acre foot)

**Foliar broadcast application** - 1 gallon Alligare IMOX Herbicide per acre (1.0 pound of imazamox acid equivalent) per acre
Foliar spot application - up to 5% v/v Alligare IMOX Herbicide

Minimum Treatment Intervals:
Water treatment - 14 days; unless the retreatment is following an initial water column application that has failed to maintain the original targeted ppb concentration.

Foliar broadcast applications – 14 days

Foliar spot applications – Retreat as needed

Irrigation Restrictions
• DO NOT use treated water to irrigate greenhouses, nurseries, or hydroponics until the imazamox concentration has been determined by an acceptable method to be less than or equal to 1.0 ppb.
• DO NOT plant sugar beets, onions, potatoes or non-Clearfield™ canola in soils that have been previously irrigated with Alligare IMOX Herbicide treated water until the soil biomass successfully demonstrates acceptable levels of crop tolerance. The only exception to this restriction is if the water is from foliar applications to emergent and/or floating vegetation in flowing water sites where it has been applied at less than or equal to 1.0 quarts per acre to waters with an average depth of greater than or equal to 4 feet.
• DO NOT use Alligare IMOX Herbicide treated waters resulting in a concentration greater than 50 ppb for irrigation of established (emerged) plants until residue levels have been shown to be less than or equal to 50 ppb by an acceptable method.
• After application of Alligare IMOX Herbicide to dry areas above the high-water line of irrigation canals or channels, aptical aquatic species or when treating small areas in larger bodies of water (partial or spot applications with lower rates may provide plant growth regulation or greater selectivity while treating larger areas, more intimate or susceptible plants, and areas with less potential for rapid water exchange.
• Floating water sources at concentrations up to 500 ppb to within a distance of 1/4 mile from an active potable water intake. Within 1/4 mile of an active potable water intake, Alligare IMOX Herbicide may be applied, but water concentrations resulting from injection and/or foliar applications may not exceed 50 ppb. If water concentrations greater than 50 ppb are required, the potable water intake must be shut down and, if necessary, the potable water supply be made available until the water concentration can be shown to be less than 50 ppb by an acceptable method.

Alligare IMOX Herbicide applied at less than or equal to 2 quarts per acre in or on waters with a minimum average depth greater than or equal to 4 feet, will result in imazamox concentrations less than 25 ppb.

Other Water Use Restrictions
There are no restrictions on livestock watering, swimming, fishing, domestic use, or use of treated water for agricultural sprays. No recharge flush or use water restrictions are required for applications to dry areas above the high-water line of irrigation canals or channels.

Water lettuce
Water hyacinth
Water milfoil
Water chestnut
Water hyacinth
Water lettuce
Water lily
Watershed
Wild taro

Alligare IMOX Herbicide may be applied at less than or equal to 2 quarts per acre to waters with an average depth of greater than or equal to 4 feet. After application of Alligare IMOX Herbicide to dry irrigation canals/ditches below the high-water mark, the initial flush of water during recharge must not be used for irrigation purposes unless the imazamox concentration has been determined by an acceptable method to be less than 25 ppb.

Vascular Aquatic Plant Control Using Surface or Injected Herbicide Applications (50-500 ppb)
There are three herbicide susceptibility levels of control for vascular aquatic plants: susceptible (50-200 ppb), intermediate susceptible (100-300 ppb) and partially susceptible (200-500 ppb).

Some vascular aquatic plants that are easy to control from foliar applications of Alligare IMOX Herbicide may be hard to control from in-water applications. Higher use rates may be required to achieve desired control/suppression in sites with high water exchange rates or when treating more mature or less susceptible plants or when treating more difficult-to-control aquatic species or when treating small areas in larger bodies of water (partial or spot treatments). Lower concentrations are normally used when conducting early season large-scale treatments; when greater selectivity is desired; and when treating larger areas, more immature or susceptible plants, and areas with less potential for rapid water exchange.

Use of lower rates may increase selectivity on some species within the same category. Effects on susceptible plants can range from control to growth regulation depending on treatment site characteristics, exposure time, and application rate. Susceptible plant species may exhibit herbicide stress or reduced growth during active treatment phases. Whole lake applications with lower rates may provide plant growth regulation or greater selectivity while higher rates will normally provide broader activity.

Vascular Aquatic Plant Susceptibility Chart
Common Name | Scientific Name | Rate (ppb)
--- | --- | ---
Water hyacinth | Eichhornia crassipes | 50 – 200
Water lily | Nymphaea odorata | 200 – 500
Waterwheel | Brasenia schreberi | 200 – 500
Water stargrass | Hydrochloa dubia | 50 – 200
Widgeon grass | Nuphar plantagineum | 100 – 300

Specific Weed Control Directions

For Eurasian Watermilfoil, Use Alligare IMOX Herbicide at 100 - 200 ppb range early in the growing season to actively growing plants. Repeat applications may be required on mature Eurasian watermilfoil where the vegetation has topped out.

For Hydrilla. Use Alligare IMOX Herbicide at 150 - 200 ppb range early in the growing season to actively growing plants. Repeat applications may be required if the application is made prior to topped-out hydrilla. To suppress and growth-suppress hydrilla for up to 10 - 12 weeks, use a single application of 50 to 75 ppb. To extend the period of growth suppression when normal hydrilla growth resumes, apply a second application of 50 to 75 ppb.

For Japanese Elodea. Since Japanese elodea is found in tidal and intertidal areas and is a submerged aquatic plant, apply Alligare IMOX Herbicide either directly in the water or directly to the plant (e.g. at low tide).
- Low-tide application - When the Japanese elodea is exposed at low tide, apply Alligare IMOX Herbicide uniformly with properly calibrated broadcast or spot treatment equipment in 10 or more gallons of water per acre.
  - Use of an appropriate spray adjuvant approved for aquatic is optional. If desired, add 1% by volume of a non-ionic surfactant to reduce drift potential.
  - For spot treatments apply up to 5% v/v Alligare IMOX Herbicide spray. When treating areas with large and/or dense vegetation, higher spray volumes may be required. Depending upon spray equipment, conditions, and application objectives, adjust spray pressure to minimize drift potential.
- For broadcast application, apply 4 - 32 fluid ounces per acre of Alligare IMOX Herbicide. Use the lower rate for management of seedlings.

For Winter Watercress. Use Alligare IMOX Herbicide as broadcast spray to the water surface or injected below the water surface. Alligare IMOX Herbicide may be applied as an undiluted product or diluted with water before application. Under surface-matted conditions, inject Alligare IMOX Herbicide below the water surface to improve product distribution. Apply Alligare IMOX Herbicide to water to achieve a final concentration of the active ingredient of no more than 500 ppb. Applications of Alligare IMOX Herbicide may be made during the annual growth cycle to maintain the desired vegetation response.

For Sago Pondweed. In dry ditches (drainage and irrigation), sago pondweed may be controlled or growth-suppressed with soil-applied Alligare IMOX Herbicide at 64 - 128 fluid ounces per acre. In irrigation canals, apply Alligare IMOX Herbicide after drawdown and prior to water recharge.

**STORAGE AND DISPOSAL**

Do not contaminate water, food, or feed by storage and disposal.

PESTICIDE STORAGE: Store in original container only. Avoid freezing. Store above 32°F. If frozen, poor weed control may result. In case of leak or spill, use absorbent materials to contain liquids and dispose of waste.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

(For rigid containers 5 gallons or less)

CONTAINER HANDLING: Non-refillable container. Do not reuse or refill this container. Offer for recycling if available or puncture and dispose in a sanitary landfill, or by incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke.

Triplet rinse or pressure rinse container (or equivalent) promptly after emptying. Triplet rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank or collect rinsate for later use or disposal. Repeat this procedure two more times. Pressure rinse nozzle in the side of the container, and rinse at about 40 psi for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

(For nonrefillable rigid containers larger than 5 gallons)

CONTAINER HANDLING: Non-refillable container. Do not reuse or refill this container. Offer for recycling if available or puncture and dispose in a sanitary landfill, or by incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke. Triplet rinse or pressure rinse container (or equivalent) promptly after emptying. Triplet rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 psi for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

**CONCENTRATION OF SALE AND LIMITATION OF LIABILITY**

To the extent consistent with applicable law, upon purchase or use of this product, purchaser and user agree to the following terms:

**Warranty**: Alligare, LLC (the Company) warrants that this product conforms to the chemical description on the label in all material respects and is reasonably fit for the purpose referred to in the directions for use, subject to the exceptions noted below, which are beyond the Company’s control. To the extent consistent with applicable law, the Company makes no other representation or warranty, express or implied, concerning the product, including no implied warranty of merchantability or fitness for a particular purpose. To the extent consistent with applicable law, no such warranty shall be implied by law, and no agent or representative is authorized to make any such warranty on the Company's behalf.

**Terms of Sale**: The Company’s directions for use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, and the manner of use or application (including failure to adhere to label directions), all of which are beyond the Company’s control. To the extent consistent with applicable law, all such risks are assumed by the user.

**Limitation of Liability**: To the extent consistent with applicable law, the exclusive remedy against the Company for any cause of action relating to the handling or use of this product is a claim for damages, and in no event shall damages or any other recovery of any kind exceed the price of the product which caused the alleged loss, damage, injury or other claim. To the extent consistent with applicable law, under no circumstances shall the Company be liable for any special, indirect, incidental or consequential damages of any kind, including loss of profits or income. Some states do not allow the exclusion or limitation of incidental or consequential damages.

The Company and the seller offer this product, and the purchaser and user accept this product, subject to the foregoing warranty, terms of sale and limitation of liability, which may be varied or modified only by an agreement in writing signed on behalf of the Company by an authorized representative.

To the extent consistent with applicable law, upon purchase or use of this product, purchaser and user agree to the following terms:

**Warranty**: Alligare, LLC (the Company) warrants that this product conforms to the chemical description on the label in all material respects and is reasonably fit for the purpose referred to in the directions for use, subject to the exceptions noted below, which are beyond the Company’s control. To the extent consistent with applicable law, the Company makes no other representation or warranty, express or implied, concerning the product, including no implied warranty of merchantability or fitness for a particular purpose. To the extent consistent with applicable law, no such warranty shall be implied by law, and no agent or representative is authorized to make any such warranty on the Company’s behalf.

**Terms of Sale**: The Company’s directions for use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, and the manner of use or application (including failure to adhere to label directions), all of which are beyond the Company’s control. To the extent consistent with applicable law, all such risks are assumed by the user.

**Limitation of Liability**: To the extent consistent with applicable law, the exclusive remedy against the Company for any cause of action relating to the handling or use of this product is a claim for damages, and in no event shall damages or any other recovery of any kind exceed the price of the product which caused the alleged loss, damage, injury or other claim. To the extent consistent with applicable law, under no circumstances shall the Company be liable for any special, indirect, incidental or consequential damages of any kind, including loss of profits or income. Some states do not allow the exclusion or limitation of incidental or consequential damages.

The Company and the seller offer this product, and the purchaser and user accept this product, subject to the foregoing warranty, terms of sale and limitation of liability, which may be varied or modified only by an agreement in writing signed on behalf of the Company by an authorized representative.
