\*A technical pesticide product contains only pure active ingredient and is used to create end-use products that require registration by US EPA; a technical product is not used in the field. Technical products must also be registered by EPA, and companies that hold technical registrations are called "Technical Registrants." A Technical Registrant typically has a significantly greater investment, as well as greater responsibilities and liabilities, than an end-use product registrant. As an ADAMA subsidiary, Alligare has embraced this additional responsibility by making the long-term commitment of supporting and maintaining technical registrations, and this is just another solution-based tool Alligare provides to its end-users and the IVM market.
