PRODUCT INFORMATION BULLETIN

GUNSLINGER® AMP PASTURE HERBICIDE

EPA Reg. No. 81927-81

FIFRA 2(ee) Recommendation*

For Distribution and Use Only in the States of AL, AR, FL, GA, IA, KS, KY, LA, MO, MS, NC, ND, NE, OK, OR, SC, SD, TN, VA, WA, and WV

Applications of GUNSLINGER AMP PASTURE HERBICIDE Impregnated on Dry Fertilizer

ATTENTION

*This recommendation is made as permitted under FIFRA 2(ee) and has not been submitted to or approved by the EPA.

- Read the label affixed to the container for GUNSLINGER AMP PASTURE HERBICIDE before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of GUNSLINGER AMP PASTURE HERBICIDE according to this product bulletin is subject to all use precautions and limitations imposed by the label affixed to the container for GUNSLINGER AMP PASTURE HERBICIDE.

Directions for Use

NOTE: It is the responsibility of the individual and/or company selling the fertilizer/herbicide mixture to follow all state regulations relating to dry bulk fertilizer blending, labeling and application.

IMPREGNATION: The herbicide/fertilizer impregnation process must be done at commercial fertilizer or chemical dealerships that are properly equipped for this procedure and **the mixing and application equipment must be dedicated for use only on grasslands.**

NOTE: The practice of impregnating GUNSLINGER AMP PASTURE HERBICIDE on dry fertilizer is recommended only for dealers whose primary business is range and pasture. **The rates recommended to control the weed and brush species listed on the label were determined using foliar broadcast applications in water. Fertilizer impregnation with GUNSLINGER AMP PASTURE HERBICIDE may or may not provide the same level of control as the foliar broadcast application.**

Maximum use rate of GUNSLINGER AMP PASTURE HERBICIDE is 2.1 pints per acre per year. The target rate of GUNSLINGER AMP PASTURE HERBICIDE should be impregnated on a minimum of 200 lbs of dry fertilizer per acre to insure sufficient dry fertilizer volume for adequate coverage when applied. It is recommended that a dye be added to the slurry to differentiate the impregnated fertilizer from non-treated fertilizer. The addition of a surfactant or MSO is recommended to enhance the coverage on the fertilizer prills. The use of a drying agent is recommended when impregnating dry fertilizer with GUNSLINGER AMP PASTURE HERBICIDE.

GUNSLINGER AMP PASTURE HERBICIDE can be applied to and mixed with fertilizer undiluted unless volumes of fertilizer exceed 400 lbs per acre or the operator observes incomplete coverage. For higher fertilizer volumes, a slurry of 1 part GUNSLINGER AMP PASTURE HERBICIDE with up to 5 parts water can be used to improve coverage of fertilizer prills. After the herbicide has been applied to the fertilizer, continuously mix the fertilizer in the mixer for as long as needed to ensure uniform prill coverage with GUNSLINGER AMP PASTURE HERBICIDE. Continuous agitation (mechanical or recirculating) is needed to improve GUNSLINGER AMP PASTURE HERBICIDE impregnation on dry fertilizer.

The delivery nozzle(s) must be placed inside the mixer and positioned to provide uniform spray coverage of the tumbling fertilizer. Use GUNSLINGER AMP PASTURE HERBICIDE impregnated dry fertilizer as soon as possible after blending.

APPLICATION: Apply GUNSLINGER AMP PASTURE HERBICIDE impregnated dry fertilizer during the normal fertilizer schedule for your grassland. When using fan spreaders, a 100% overlap is recommended. Fan spreaders should be calibrated to apply $\frac{1}{2}$ the desired rate per acre. Application pattern should be overlapped to cover $\frac{1}{2}$ of the previous swath. Nonuniform spreading of the herbicide-fertilizer mixture may result in unsatisfactory weed control or crop injury.

Follow all applicable use directions, precautions, and limitations on the EPA-registered label for GUNSLINGER AMP PASTURE HERBICIDE.

It is impossible to eliminate all risks associated with the use of this product. Crop injury, lack of performance, or other unintended consequences may result because of numerous factors including, but not limited to, use of the product contrary to label instructions (including, but not limited to, conditions noted on the label, such as unfavorable temperatures, soil conditions and other similar factors), abnormal conditions (such as excessive rainfall, drought, tornadoes, hurricanes and other similar conditions), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Alligare, LLC or the seller. To the extent permitted by law, all such risks shall be assumed by buyer.
