# PRODUCT GUIDE

**RANGE & PASTURE**

Treated pastures produce more vegetation and lead to higher levels of forage production for livestock, higher rate of gain per pound of forage, an increase in the number of head per acre, and ultimately higher profit margins on sale day.

**BROADLEAF WEEDS**

**ANNUAL GRASSES**

**BRUSH CONTROL**

**NOXIOUS WEEDS**

| RECOMMENDED SOLUTION                                  | PERFORMANCE HIGHLIGHTS   | USES  |
|---|--|---|
| <b>CLEARGRAZE®</b><br>Triclopyr<br>Fluroxypyr         | A premier pasture herbicide with quality results on dogfennel, prickly pear, sericea lespedeza, and many other hard-to-kill weeds and brush. This solution is soil residual and nonvolatile.   |     |
| <b>FLAGSTAFF™</b><br>Fluroxypyr                       | This quick-acting, nonvolatile solution performs in sensitive areas and works well on resistant weeds with no soil residual activity.  |     |
| <b>GUNSLINGER® AMP</b><br>Aminopyralid<br>2,4-D Amine | A broad-spectrum, broadleaf weed control for pastures that works well on thistles, knapweeds, and several species of locusts. This solution can be mixed with dry fertilizer to reduce application time and also offers residual activity for season-long control.             |     |
| <b>GUNSLINGER® P+D</b><br>Picloram<br>2,4-D Amine     | This solution is the proven standard for weed and brush control in pastures, ideal when mixed with liquid fertilizer, and offers residual activity for season-long control.  |     |
| <b>PANORAMIC 2 SL</b><br>Imazapic                     | This solution is the standard for annual grass control on rangelands and hay fields, including cheatgrass, medusahead, and ventenata. This is also an excellent option for leafy spurge control. Panoramic 2 SL may cause damage if applied to actively growing Bermuda grass. |    |
| <b>PRESCOTT</b><br>Triclopyr<br>Clopyralid            | A broad-spectrum, broadleaf weed and brush control solution that offers residual activity, low volatility, and is an ideal choice for pastures with woody plant encroachment.  |     |
| <b>SONORA™</b><br>Clopyralid                          | For selective weed and brush control, this solution offers quality results on legumes such as mesquite and several species of locusts, as well as thistles and other broadleaf weed species.   |     |
| <b>TRIUMPH® 22K</b><br>Picloram                       | This solution has established results in prickly pear control, as well as other broadleaf weeds and woody plants, and is a reliable option for leafy spurge and the control of juniper as an individual plant treatment.   |     |
| <b>TRIUMPH® RTU</b><br>Picloram 2,4-D                 | This ready-to-use product controls small populations of hard-to-kill weeds and brush and is an effective cut stump treatment that works to prevent new growth.   |    |
| <b>WHETSTONE™</b><br>Aminopyralid                     | Selective weed control for noxious and invasive plants with tolerance for sensitive grasses, this solution fits a tremendous range of use sites, including non-crop areas such as roadsides and rights-of-way, natural areas, and range and pastureland.                       |    |
