

LARAMIE 25DF

ANNUAL GRASS CONTROL FOR THE RELEASE OF DESIRABLE PERENNIAL SPECIES

Alligare's Laramie 25DF is a dry flowable herbicide used for selective and non-selective weed control and invasive species management in non-crop vegetation areas and rangeland restoration sites.

PERFORMANCE HIGHLIGHTS

- Flexible tank mix options to allow for location-specific recommendations.
- Bureau of Land Management (BLM) approved.
- Limited residual with pre- and post-emergent activity
- Effective on cheatgrass, medusahead, and other annual grasses for rangeland restoration on western rangelands and on glyphosate-resistant broadleaf weed species such as maretail and amaranth

FOR BEST RESULTS

1. For post-emergent applications, apply to small, actively growing weeds.
2. For pre-emergent applications, the bed or soil surface should be free of crop or weed trash.
3. A spray adjuvant must be added to the application of Laramie 25DF. An NIS or MSO can be used depending on the target weed species.

USE SITES

- industrial sites
- non-crop areas
- roadsides
- medians and roadsides
- rangelands
- utility substations

LARAMIE 25DF

ACTIVE INGREDIENT: RIMSULFURON

TARGETED WEEDS

Barnyardgrass

Downy Brome

Japanese brome

Medusahead

Black mustard

Foxtail

Large crabgrass

Smooth pigweed

Bulbous bluegrass

Hairy fleabane

Redroot pigweed

Puncturevine

Mallow (common)

Ventenata

Redstem filaree

Marestail/horseweed

BROADCAST MIXING INSTRUCTIONS

1. Fill the tank 1/4 to 1/3 full of water.
2. While agitating, add the required amount of Laramie 25DF.
3. Continue agitation until the Laramie 25DF is fully dispersed. This should take at least five minutes.
4. Once the Laramie 25DF is fully dispersed, maintain agitation and continue filling the tank with water.
5. Laramie 25DF should be thoroughly mixed with water before adding any other material.
6. As the tank is filling, add desired tank mix partners. Then add the required amount of spray adjuvant, if needed. Always add the spray adjuvant last.
7. Apply Laramie 25DF spray mixture within 48 hours of mixing to avoid product degradation.
8. If Laramie 25DF and the tank mix partners are to be applied in multiple loads, pre-slurry the Laramie 25DF in clean water prior to adding it to the tank. This will prevent the tank mix partner from interfering with the dissolution of the Laramie 25DF.
9. Continuous agitation is required to maintain the product in suspension in the spray tank.

ALWAYS READ AND FOLLOW LABEL INSTRUCTIONS

SIGNAL WORD

CAUTION

APPLICATION DETAILS

MOA Group 2 (sulfonylurea herbicide)

Use Rate 4 oz./acre (broadcast application)

WORKER SAFETY

long-sleeved shirt and long pants

chemical-resistant gloves made of

any waterproof material.

shoes plus socks
