

HYVAR X

ALLIGARE.COM

ELEVATE YOUR EXPECTATIONS WITH THIS HISTORICALLY PROVEN, BARE-GROUND HERBICIDE

Alligare's Hyvar X provides extended, broad-spectrum control of undesirable vegetation.

PERFORMANCE HIGHLIGHTS

- Consistent performance, long-lasting residual
- Excellent on many tough-to-control grasses, such as Bermudagrass, Quackgrass, and Johnsongrass
- Can be applied under asphalt and concrete pavement in industrial areas

FOR BEST RESULTS

1. Best results are obtained when rainfall occurs within two weeks following application.
2. Optimal weed control is achieved when Hyvar X is applied as a pre-emergent, prior to germination.
3. For post-emergent control of perennial species, Hyvar X should be tank-mixed with a systemic, foliar-absorbed herbicide, such as glyphosate.

USE SITES

- railroad rights-of-way
- under asphalt and concrete pavement
- pipelines
- petroleum tank farms
- storage areas
- industrial sites

NOTE: Hyvar X should not be applied in, or around, sensitive areas where valued vegetation is adjacent to the bare-ground site. Do not apply Hyvar X within the root zone of desirable plants and tree species.

HYVAR X

ACTIVE INGREDIENT: BROMACIL 80%

TARGETED WEEDS

Cheat
Crabgrass
Foxtail

Bahiagrass
Bermudagrass
Johnsongrass

Quackgrass
Puncturevine
Ragweed

Dogfennel
Broomsedge
Wild carrot

MIXING INSTRUCTIONS

1. Fill the tank 1/4 to 1/3 full of water.
2. While agitating, add the required amount of Hyvar X.
3. Continue agitation until the herbicide is fully dispersed.
4. Maintain agitation and continue filling the tank with water.
5. Add any tank mix partners, if desired, followed by the necessary volume of spray adjuvant.

ALWAYS READ AND FOLLOW LABEL INSTRUCTIONS

SIGNAL WORD

CAUTION

APPLICATION DETAILS

MOA Group 5, PSII Inhibitor
Broadcast Rates 3 – 15 lbs/ac

WORKER SAFETY

long-sleeve shirt and long pants
chemical-resistant gloves
shoes plus socks
